Exercise: guess my number

10.0 points possible (graded)

ESTIMATED TIME TO COMPLETE: 15 minutes

In this problem, you'll create a program that guesses a secret number!

The program works as follows: you (the user) thinks of an integer between 0 (inclusive) and 100 (not inclusive). The computer makes guesses, and you give it input - is its guess too high or too low? Using bisection search, the computer will guess the user's secret number!

Here is a transcript of an example session:

Types

- ▶ [Week 4: Good Programming Practices](#)
- ▶ [Midterm Exam](#)
- ▶ [Sandbox](#)

```
Please think of a number between 0 and 100!
Is your secret number 50?
Enter 'h' to indicate the guess is too high. Enter 'l' to
indicate the guess is too low. Enter 'c' to indicate I
guessed correctly. l
Is your secret number 75?
Enter 'h' to indicate the guess is too high. Enter 'l' to
indicate the guess is too low. Enter 'c' to indicate I
guessed correctly. l
Is your secret number 87?
Enter 'h' to indicate the guess is too high. Enter 'l' to
indicate the guess is too low. Enter 'c' to indicate I
guessed correctly. h
Is your secret number 81?
Enter 'h' to indicate the guess is too high. Enter 'l' to
indicate the guess is too low. Enter 'c' to indicate I
guessed correctly. l
Is your secret number 84?
Enter 'h' to indicate the guess is too high. Enter 'l' to
indicate the guess is too low. Enter 'c' to indicate I
guessed correctly. h
Is your secret number 82?
Enter 'h' to indicate the guess is too high. Enter 'l' to
indicate the guess is too low. Enter 'c' to indicate I
guessed correctly. l
Is your secret number 83?
Enter 'h' to indicate the guess is too high. Enter 'l' to
indicate the guess is too low. Enter 'c' to indicate I
guessed correctly. c
Game over. Your secret number was: 83
```

[Click to See Test Cases](#)

Note: your program should use `input` to obtain the user's input! Be sure to handle the case when the user's input is not one of `h`, `l`, or `c`.

When the user enters something invalid, you should print out a message to the user explaining you did not understand their input. Then, you should re-ask the question, and prompt again for input. For example 

```
Is your secret number 91?  
Enter 'h' to indicate the guess is too high. Enter 'l' to  
indicate the guess is too low. Enter 'c' to indicate I  
guessed correctly. y  
Sorry, I did not understand your input.  
Is your secret number 91?  
Enter 'h' to indicate the guess is too high. Enter 'l' to  
indicate the guess is too low. Enter 'c' to indicate I  
guessed correctly. c
```

```
1 # Paste your code into this box  
2
```

Press ESC then TAB or click outside of the code editor to exit

Unanswered

If you believe you have correct code but it is marked incorrect after clicking "Check"...

After you submit your code, you can see every test case the graders runs on your code. They compare what your code outputs with what our answer code is supposed to output. Click the small link titled "See Full Output" below the Test Results header.
