Exercise 2

16 points possible (graded) **ESTIMATED TIME TO COMPLETE: 5 minutes**

Note that you will have to answer all questions before you can click the Check button.

DownloadPython andGet Motivated!

For each of the expressions below, specify its type and value. If it generates an error, select type 'NoneType' and put the word 'error' in the box for the value.

Week 1: Python Basics Assume we've made the following assignment:

$$x = [1, 2, [3, 'John', 4], 'Hi']$$

Week 2: SimplePrograms

Additionally, assume that the expressions are evaluated in the order shown - that is, each problem part is evaluated directly after the previous problem part(s).
